VERITAS™

The truth in information.

A crucial part of any digital transformation into a cloud-first organization is defining the various services required and deciding whether to run them in-house or outsource to a service provider. Email security, delivery and mailbox functionality is one such service, and Microsoft Office 365 is becoming the messaging and collaboration platform for many organizations. With Veritas Enterprise Vault, a leading enterprise information archiving solution, you can gain all the benefits of Office 365 and help ensure you can continue to satisfy the compliance and eDiscovery requirements that the organization has to adhere to, while treating the email service provider as just that – a service provider. Vendor lock-in is one of the top three concerns organizations have according to IDC's 2016 Cloud Computing survey. Enterprise Vault helps mitigate this worry by supporting changing your email service from one provider to another and by helping reduce the need for large data migration projects. Reduce costs and streamline the migration process by archiving first, and leverage our advanced PST migration capabilities, which can help eliminate the need to migrate all data to Office 365 or other providers when transitioning. Enterprise Vault also allows users seamless access to their historic, archived information and administrators and compliance teams the ability to consolidate their compliance and governance approach across the business.

UNDERSTAND THE DATA

With Veritas Enterprise Vault, you can archive over 80 content sources and collate all of the business data you keep long term in one place. Confidently analyze, categorize, and prioritize the information you retain with our enhanced multi-faceted Integrated Classification Engine. Use this improved understanding and categorization of data to drive your information governance strategies and simplify storage, retention, supervision and discovery.

Natively and through validated partner solutions, Veritas can archive your critical Microsoft content from Office 365 with Exchange Online to Skype for Business, SharePoint and Yammer.
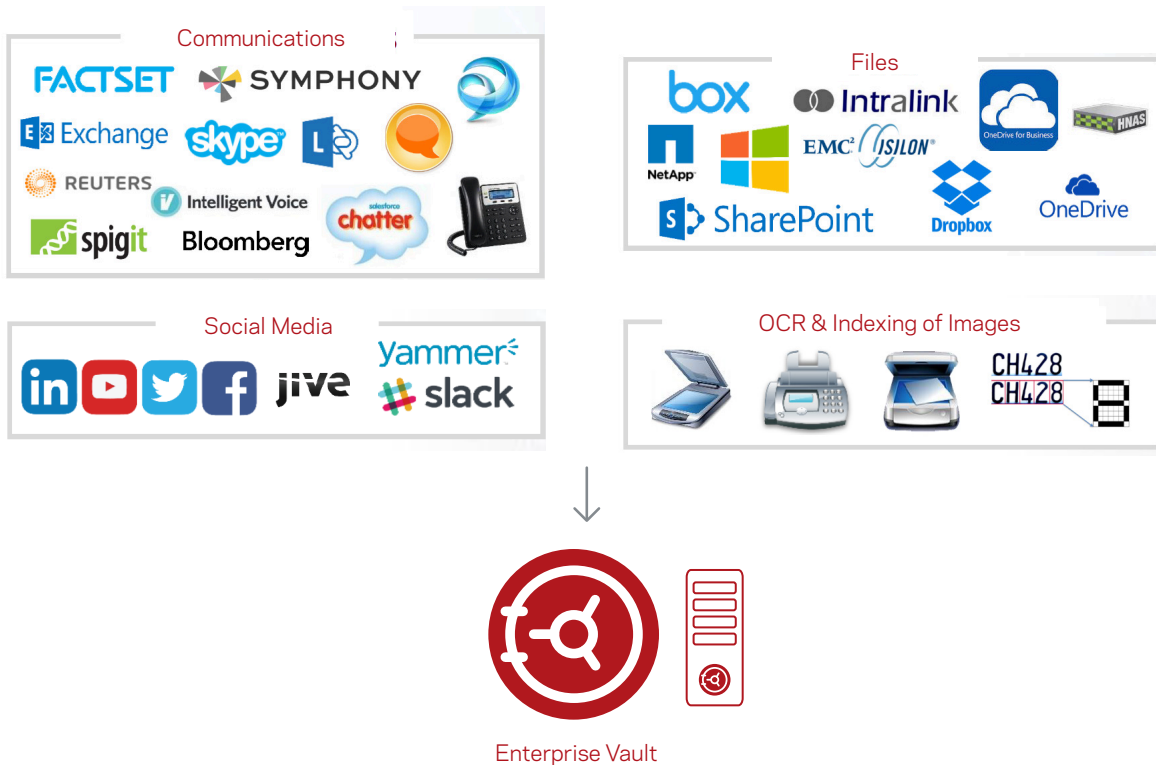

Key Benefits

- Reduce costs by minimizing data to be migrated.

- Automatically classify information with our Integrated Classification Engine, which supports many data protection regulations and corporate standards worldwide.

- Consolidate all of your archived data into one long-term repository, independent of user behavior.

- Deploy Enterprise Vault flexibly on premises, in the cloud, or in hybrid configurations.

SIMPLE EMAIL ARCHIVING WITH ENTERPRISE VAULT SMTP ARCHIVING

Enterprise Vault SMTP archiving helps simplify the capture of journal messages from various platforms, such as Office 365, without the need to put users on litigation hold. Because Office 365 can directly journal messages to Enterprise Vault via SMTP, customers no longer have to maintain Exchange Servers on premises for the purposes of journal archiving. Messages received are then archived, indexed, classified and made available for search, compliance, and eDiscovery purposes.

Enterprise Vault SMTP archiving offers various configurations that allow you to archive for discovery purposes or end user access to data:
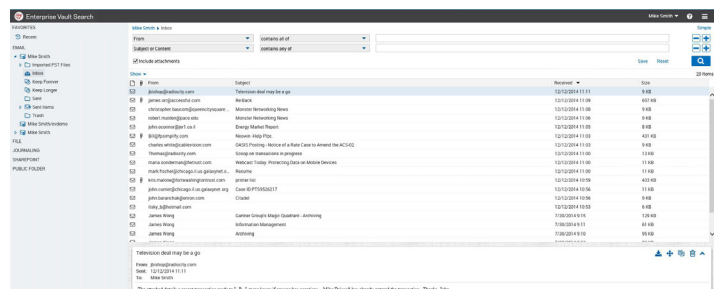

- SMTP Journaling supports archiving all messages sent to the Enterprise Vault SMTP Server in one or more journal archives.

- Selective SMTP Journaling enables you to archive only messages to or from specific addresses into a specified archive.

- SMTP Mailbox Journaling extends Selective Journaling further to store all messages to and from specific addresses in an archive that is exclusive to that address.

Enterprise Vault

END USER ACCESS

Provide users with access to their archived content when and where they want with Enterprise Vault Search. Enhanced indexing combined with optical character recognition and advanced search options helps increase productivity by allowing users to find and review relevant information quickly and easily.

Give users the power to set retention, manually classify items and move items within their archive.
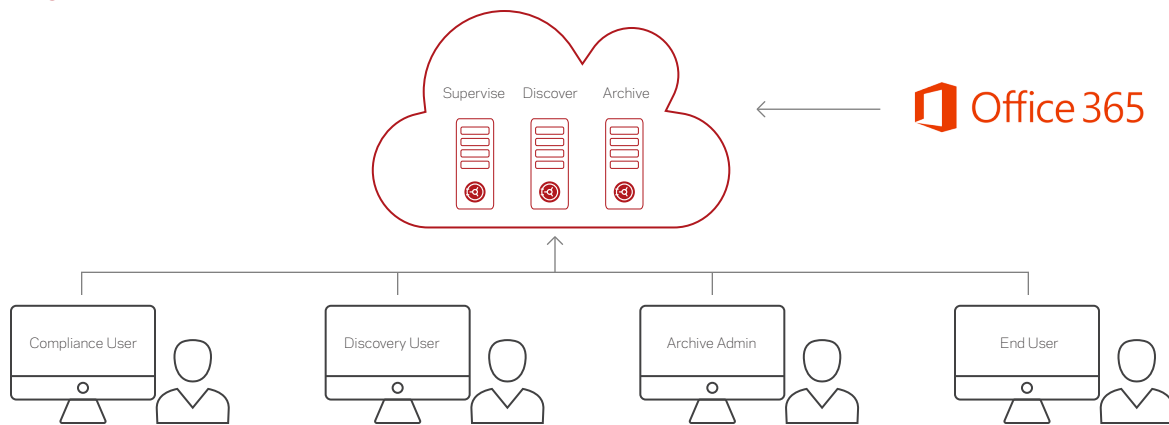

DISCOVERY & SUPERVISION

Veritas Enterprise Vault™ Discovery Accelerator provides legal and HR teams with the ability to search, preserve and review information across all archived data and an unlimited number of mailboxes from a single user interface. You can automate searches and retrieval of information to help reduce time, cost and human error, while reducing IT risk by establishing a chain of custody process supported by detailed audit trails. You can leverage defensible legal hold capabilities that help ensure data can be reliably preserved, regardless of the number of open cases. And you can easily collaborate with multiple authorized reviewers or collaborators with advanced case management capabilities built into the product and then export relative content in native formats for further review by third parties.

Veritas Enterprise Vault™ Compliance Accelerator is a highly configurable solution that helps enhance supervisory review of electronic communications, regulated or non-regulated. It provides a framework to select and sample content and supports review with clearly recorded auditing, helping reduce the cost and effort involved in supervision, review and proof of compliance.

FLEXIBLE DEPOLYMENT

Embrace the flexibility of deploying Enterprise Vault in the cloud, on premises or in a hybrid environment

ABOUT VERITAS TECHNOLOGIES LLC

Veritas Technologies empowers businesses of all sizes to discover the truth in information—their most important digital asset. Using the Veritas platform, customers can accelerate their digital transformation and solve pressing IT and business challenges including multi-cloud data management, data protection, storage optimization, compliance readiness and workload portability—with no cloud vendor lock-in. Eighty-six percent of Fortune 500 companies rely on Veritas today to reveal data insights that drive competitive advantage.
